

ISOLATION DISTANCES

4

OBJECTIVE

The purpose of this chapter is to:

- Become familiar with the isolation distance requirements in the regulations.

What is an isolation distance?

Why would it be important to have minimum isolation distances from the onlot sewage disposal system and certain features?

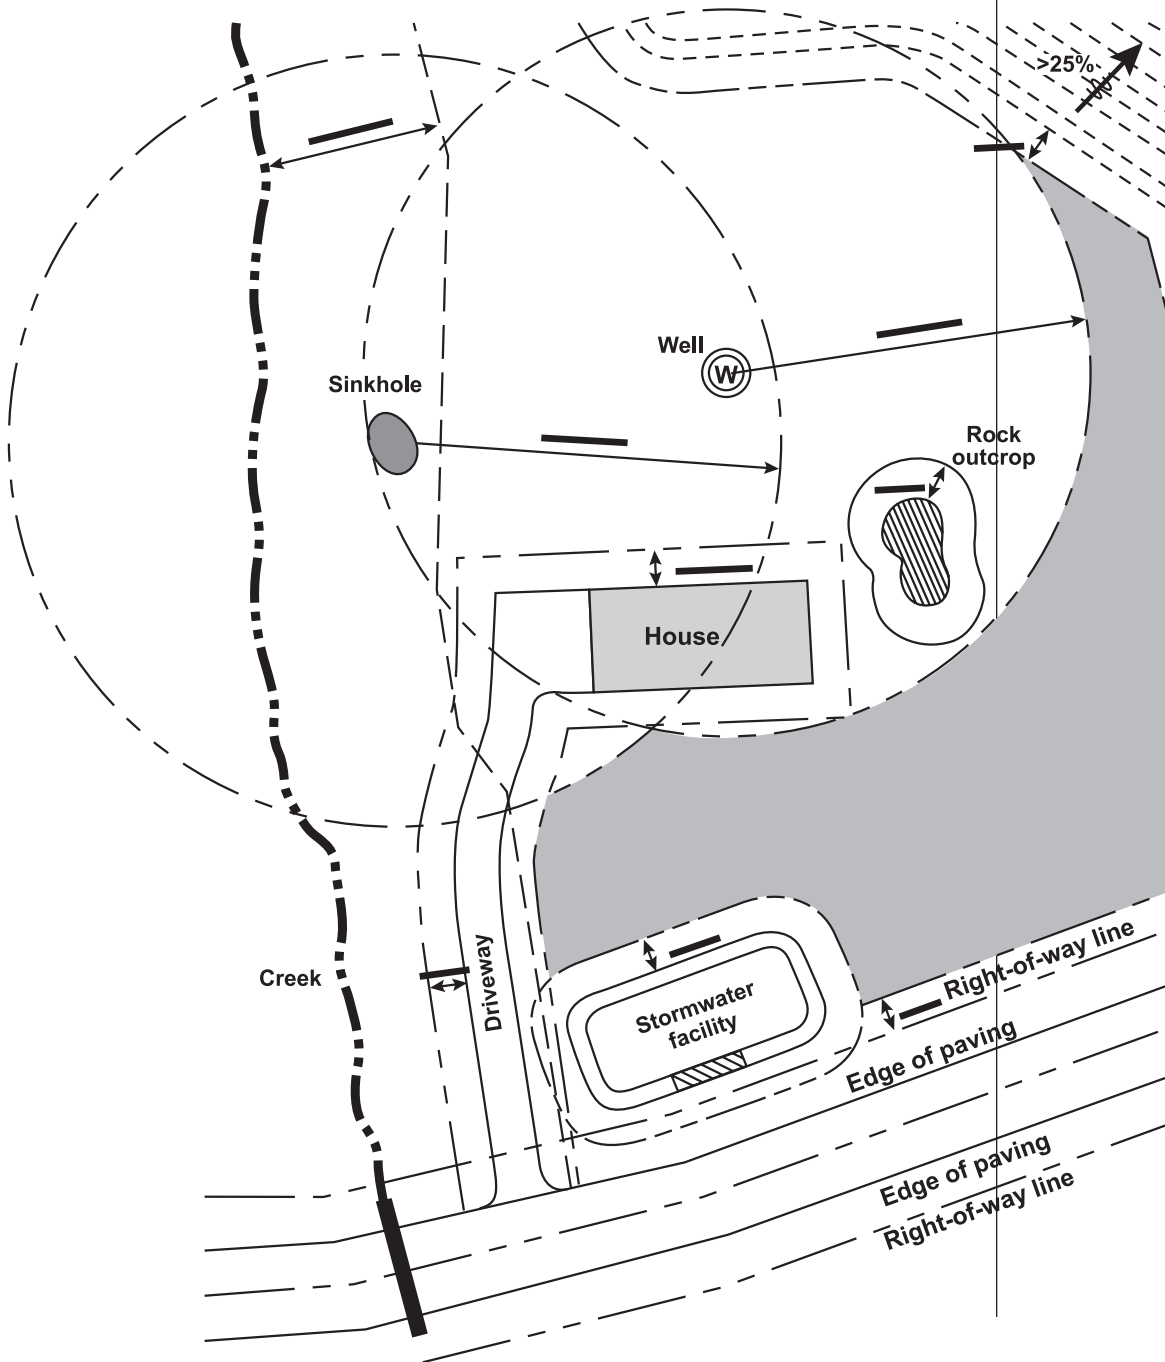

Section 73.13

PRACTICE PROBLEM

Look for features on the property plan below that have a minimum isolation distance from a tank or an absorption area. Write that distance on the plot plan in the blank provided.

NOTES

KEY POINTS

- The isolation distances at a site help to determine where the onlot sewage disposal system may be placed.
- If the isolation distances are violated, further testing at that site will be useless.

NOTES
